**Designated Critical Habitat**

The United States Fish and Wildlife Service (USFWS) has designated critical habitat pursuant to the Endangered Species Act of 1973 for 60 – 70 listed plant species known historically from the Hawaiian Islands. Data collected and disseminated to state and local agencies, May, 2003.

**Threatened and Endangered Plant Habitat**

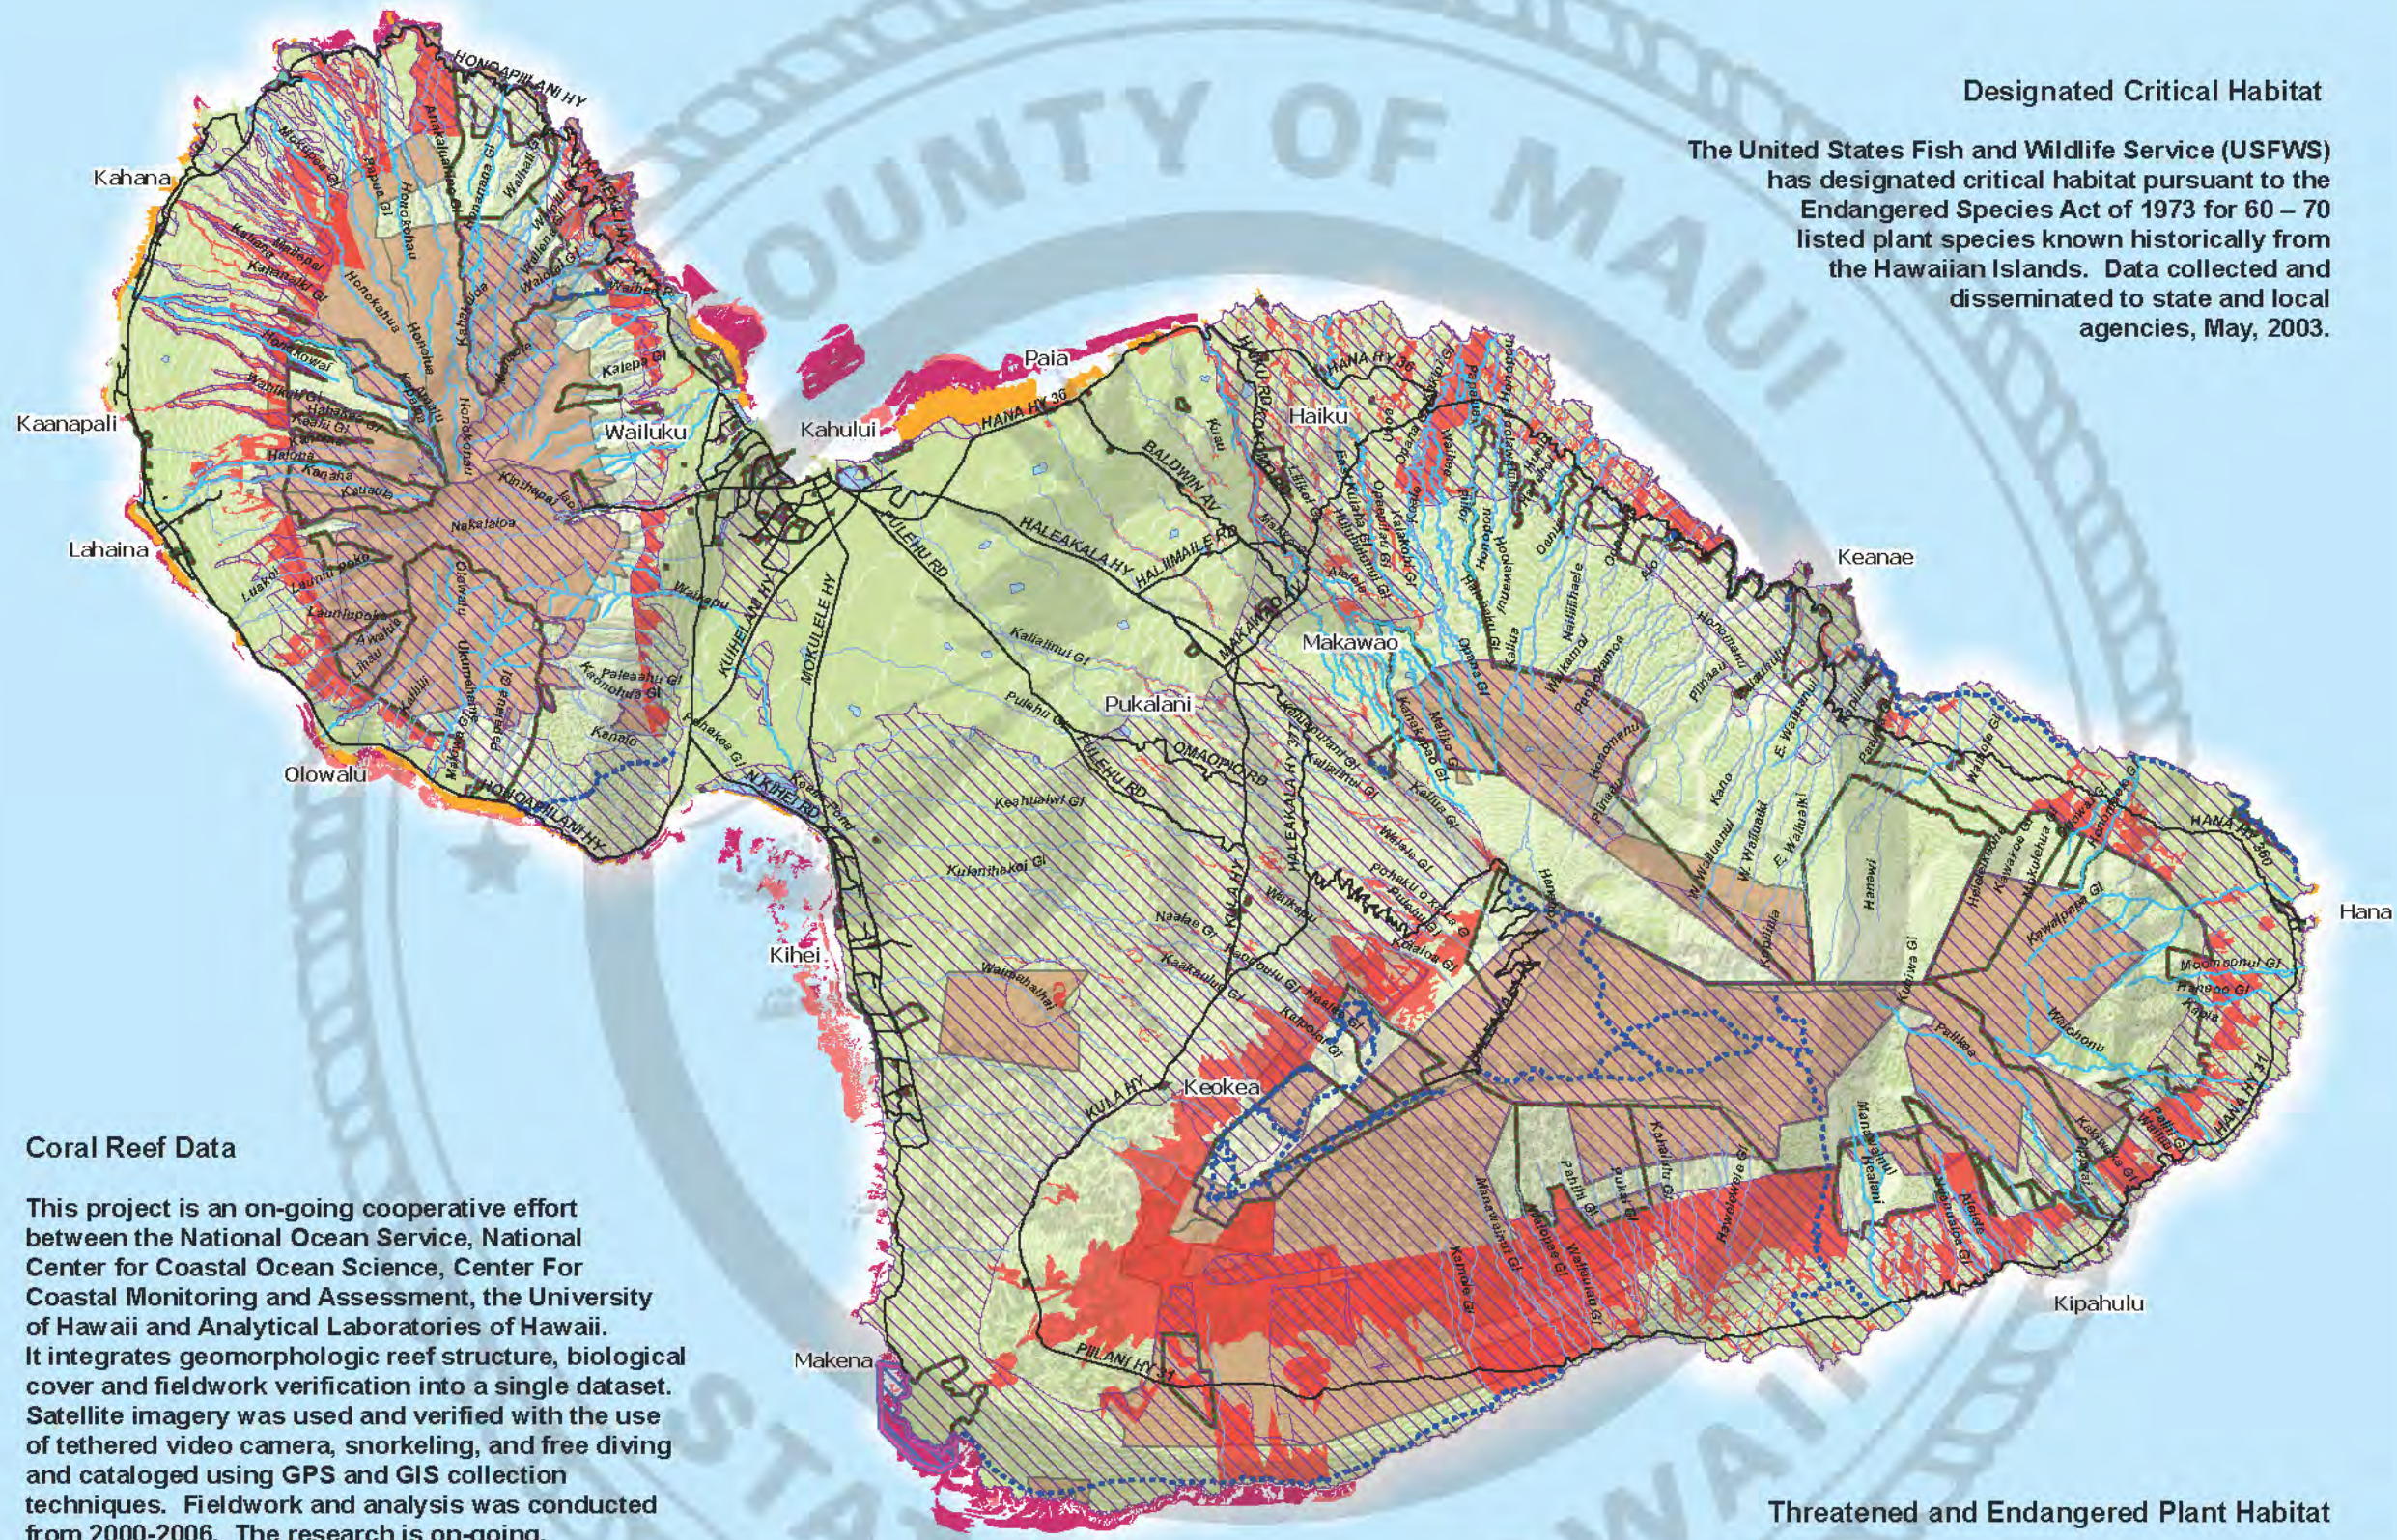

Based on the Nature Conservancy Rare and Endangered Species Mapping, 1992, there is one T & E coverage for each island. Each island is divided into distinct zones of T & E species, ranging from “low” concentration to “very high” concentration.

This map is advisory in nature and subject to change based on future research and findings.

**Draft GPAC Product**

**Coral Reef Data**

This project is an on-going cooperative effort between the National Ocean Service, National Center for Coastal Ocean Science, Center For Coastal Monitoring and Assessment, the University of Hawaii and Analytical Laboratories of Hawaii. It integrates geomorphologic reef structure, biological cover and fieldwork verification into a single dataset. Satellite imagery was used and verified with the use of tethered video camera, snorkeling, and free diving and cataloged using GPS and GIS collection techniques. Fieldwork and analysis was conducted from 2000-2006. The research is on-going.

This map is advisory in nature and subject to change based on future research and findings.

**Draft GPAC Product**

#### Threatened and Endangered Plant Habitat

Based on the Nature Conservancy Rare and Endangered Species Mapping, 1992, there is one T & E coverage for each island. Each island is divided into distinct zones of T & E species, ranging from "low" concentration to "very high" concentration.

It integrates geomorphologic reef structure, biological cover and fieldwork verification into a single dataset. Satellite imagery was used and verified with the use of tethered video camera, snorkeling, and free diving and cataloged using GPS and GIS collection techniques. Fieldwork and analysis was conducted from 2000-2006. The research is on-going.

Wailuku, Hawaii 96793  
As Recommended By:  
Maui General Plan Advisory Committee

## Marine Resource Special Area Management Zone

These areas are consistent with watersheds that are directly related to known reefs experiencing degradation. These areas are identified for management purposes to ensure that future activities are closely regulated and monitored for the future health of these reef systems. As research is made available, it is likely that additional overlay zones may be added or expanded by Maui County.

## Purpose and Intent

Develop and adopt a Special Area Management Program with the intent to protect watersheds and coastal resources through Ahupua'a/Moku management practices. The program shall include the following elements:

1. The development of Special Area Management Programs and protection standards;
2. A revised zoning ordinance to incorporate special area overlay protection districts to implement the Special Area Management Programs; and
3. Use Aha Moku Council as an advisory board.
